

Patent Offering-- Advanced Military Weaponry

Product

The patents cover: 1) Improved Dump Magazine design which is based on a helical drum configuration to provide increased capacity, reliability and manufacturability; 2) Multi-Launch Weapon which addresses these needs: a) suppressive firepower against long-distance objects; b) mobility and reduced detectability; c) ammunition portability.

Background

A firearm is a portable barreled weapon that launches one or more projectiles, generally driven by action of an explosive force. Although the first primitive firearms originated in 13th-century China, today firearms have evolved into a wide and deep multinational industry serving both civilian and military markets, where many producers serve both market categories. The focus of this offering is mainly the military segment.

Details

Three issued U.S. patents. No non-U.S. counterparts.

Marketplace

On a global basis, the U.S. ranks at the top of the list for military spending, with an expenditure of approximately \$600 billion annually. This military budget covers purchase and maintenance of arms, salaries, training, and health care of uniformed and civilian personnel, facilities, military operations and R&D conduct. This budget funds 4 branches of the U.S. military: Army, Marine Corps, Navy, and Air Force. The R&D portion is roughly \$80-100 billion annually. The weaponry marketplace is without a doubt very robust and in no danger of slowing down for the foreseeable future.

Inventor

The inventor is an experienced designer in the weapons industry, now working independently. He understands the design requirements for today's combat in the Middle East region.

Sales Package

The offered patents are subject to no encumbrances. This is a rare opportunity to acquire patents in a critical and growing technology space, which supports a massive segment of the U.S. economy along with those of many other nations. A Sales Package is available which will provide more detailed information on the above topics.
